Fax : 0090 264 359 58 99

Eds Global Membranları;

Hammadde formülasyonunun oluşturulmasından, üretimden, kauçuk ürün üretim kalıplarının teknik tasarımına kadar her aşamada profesyonel bir anlayış ile üretilmektedir.

EDS Global, çeşitli kauçuk türlerinde (NBR, SBR, EPDM, BUTİL) üretilen çok çeşitli membran ürünlerine sahiptir.

Üretim

EDS membranlarının üretildiği tüm kauçuk pres makineleri en yeni teknoloji, en iyi verimlilik ve en yüksek güvenlik standartlarına göre üretilmiştir. Bu makineler, 1600 mm x 1100 mm'ye kadar kalıp ebatları ile çok güçlü bir kapanma kuvvetine ve yüksek enjeksiyon kapasitesine (900 tona kadar ve 12,5 lts kapasiteye) sahiptir.

Laboratuvar

Laboratuvar, EDS membranlarının kalitesinin test edildiği önemli bir yerdir. Kalite kontroller öncelikle kauçuk hammaddesi ile başlar. Daha sonra, optimum üretim-kalıplama koşullarını belirlemek için nihai ürünlerde fiziksel özellikler ve mekanik özellikler (uzama, sıkıştırma, sertlik) kontrol edilir. Laboratuvarda ayrıca ısıya dayanım, su ve diğer sıvılarla temas ve döngüsel uzama ile ilgili kontroller yapılır.

Basıncılı Tanklar ve Genleşme Tankları İçin Membranlar

EDS membranları daha çok soğuk ve sıcak su depoları, sıhhi su ve ters ozmoz tanklarında kullanılmaktadır. Tankın kalbi olan bu membranlar torba şeklinde tek hacimli veya çift hacimli olarak üretilmektedir.

About EDS Global Membranes (Bladders);

A Professionalism from compounds formulation and production to rubber technical articles moulding;

EDS has a whole range of membrane (bladder) products which are produced in several types of rubber: NBR, SBR, EPDM, Butyl .

Production Cycle

All EDS membrane (bladder) press machines are very recent and produced according to the best efficiency and safety standards. These machines have a very powerful closing strength and injection capacity (up to 900 tons and a

12,5 lts capacity), with moulding planes up to 1600 mm x 1100 mm.

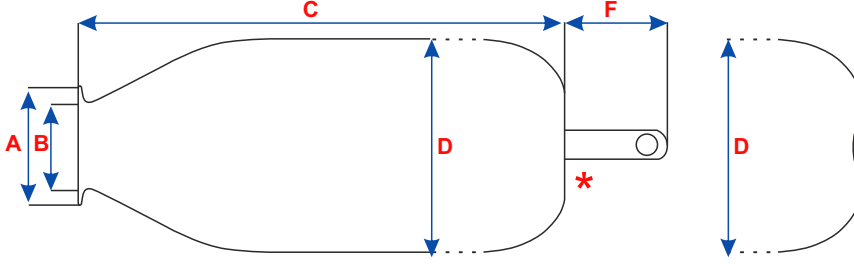

Laboratory

The laboratory is an important place to test the quality of EDS membrane (bladders) products. The controls take place at first on the compounds to identifying the quality of the material and the optimal moulding conditions, then on the final products in order to verify the physical characteristics and mechanical properties (elongation, compression, hardness). In the laboratory are also made controls related to resistance to heat, to contact with water and other fluids, and to cyclic elongation.

Membranes For Pressure Tanks And Expansion Vessels

EDS membranes (bladders) are used for cold and hot water tanks, for sanitary water and reverse osmosis. The membranes, which are the heart of the tank, are produced in bag shape and in double volume.

TEK HACİMLİ MEMBRANLAR-I (SINGLE VOLUME MEMBRANES-I)

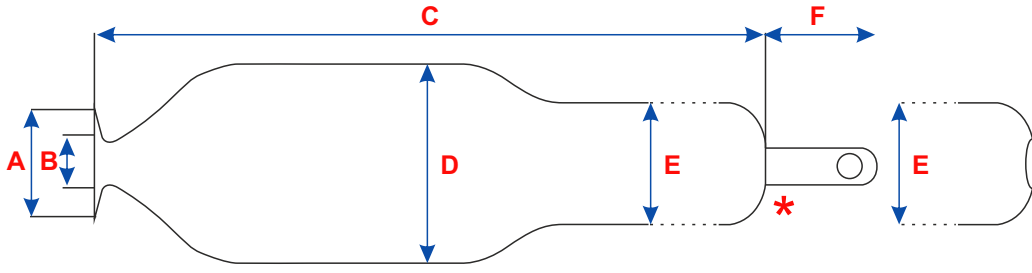

*Opsiyonel olarak Ø 26mm delikli
(*Available with hole Ø 26mm)
